HW-7

Harsimran Singh (2011CS1009)

Topics of Interest:
- Artificial Neural Network(ANN):- Because MLP can model any mathematical function, which results in the wide applicability of ANN in practice.
- Clustering:- I was fascinated by "How Google Search works?". It uses clustering as one of its components. Hence the topic.
- Support Vector Machine:- SVM, most of the times, gives optimal result whether data is linearly separable or not.

Topics to be explained in detail:-
- Linear Discriminant
- Gaussian Mixture Models
